### Acceleration Practice Problems

Directions: Use the acceleration formula below to answer the questions that follow.

**You must show all work!**

$$\text{acceleration} = \frac{\text{final velocity} - \text{initial velocity}}{\text{time}}$$

- 1) A car goes from 4.47 m/s to 17.9 m/s in three seconds.
  - a. Did this car speed up or slow down? Explain your reasoning.
  
  - b. Did this car accelerate or decelerate? Explain your reasoning.
  
  - c. Should your answer be positive or negative? Explain your reasoning.
  
  - d. Calculate the acceleration.
  
- 2) An airplane flying at a velocity of 610 m/s lands and comes to a complete stop over a 53 second period.
  - a. Did this airplane speed up or slow down? Explain your reasoning.
  
  - b. Did this airplane accelerate or decelerate? Explain your reasoning.
  
  - c. Should your answer be positive or negative? Explain your reasoning.
  
  - d. Calculate the acceleration.

- 3) What is the acceleration of a runner who goes from 1.4 m/s to 2.2 m/s in four seconds?
- 4) A roller coaster is moving at 25 m/s at the bottom of a hill. Three seconds later it reaches the top of the next hill, moving at 10 m/s. What is the deceleration of the roller coaster?
- 5) What is the acceleration of a racing car if its speed is increased uniformly from 44 m/s to 66 m/s over an 11 second period?
- 6) A 2011 Porsche 911 Turbo S goes from 0-27 m/s in 2.7 seconds. What is the car's acceleration?
- 7) A hot air balloon is rising at a speed of 10 km/hr. One hour later, the balloon is still rising at 10 km/hr. What is its acceleration?
